

Vision Benefits by Role

For IT Managers

As an IT professional, you probably spend your days filled with urgent matters leaving you very little time to perform your 'other' duties. Deltek Vision helps IT professional

System maintenance

Is maintaining all of your different systems taking too much time?

Vision fully integrates all critical business processes for the project-focused firm into one centralized database that can be accessed from anywhere, anytime with a web browser. Its web-based architecture enables all system maintenance to be done at the server level, eliminating the arduous task of maintaining at the workstation level.

Vision can help you reduce your time spent on system maintenance:

- Web-based architecture
- One database for all critical business processes

Mission Critical Data

Are you using outdated technology?

Vision's .NET framework and three tier architecture ensure that its technology is among the most contemporary, fully supported technologies on the planet. Additionally, Deltek has deployed the framework in a way that ensures a robust feature-set, optimal performance, and a productive user experience, thereby ensuring high rates of user adoption.

Vision puts a new technology backbone on your mission-critical data:

- Web-based architecture
- .NET technology
- Smart Client technology

Company Growth

Do your current applications support the business processes and needs of your growing company?

Vision's feature-set and technology foundation have been built to serve diverse needs of the project-focused firms just like yours. You gain the benefit of that experience with a product that lays a foundation for supporting your most sophisticated and demanding requirements.

Vision helps you develop a new framework to help your company grow:

- Web-based architecture
- One database for all critical business processes
